

Extra Sensory: The Science and Pseudoscience of Telepathy and Other Powers of the Mind

By Clegg, Brian.

St. Martin's. 1 Cloth(s), 2013. hard. Book Condition: New. We'd all love to have abilities like telepathy, telekinesis, and clairvoyance, notes physicist Brian Clegg but is there any solid evidence to back up these talents, or are they nothing more than fantasy? Even though many who claim these abilities are frauds, and no one has yet won James Randi's million-dollar prize for demonstrating ESP under lab conditions, we still have a Nobel Prize winner suggesting a mechanism for telepathy, and serious scientists researching field and university projects that produced potentially explosive results. We still only understand a small percentage of the capabilities of the human brain, Clegg argues, and here looks at the most compelling evidence and theories regarding extrasensory powers. "Clegg accomplishes the impressive feat of persuading readers that ESP might exist, while delivering a delightfully astute examination of the current evidence, which remains frustratingly feeble." Kirkus Reviews 308.
